Collaboration

YALA luxury canvas lodges has been installing pellet stoves in the lodges and safari tents since 2012, in collaboration with the K-Stove brand.

Our customers are now increasingly choosing to install a pellet stove in the safari tents and lodges, partly as a result of the new generation of K-Stove pellet stoves' increased efficiency and because of the flue gas exhaust system through the roof of the tents, developed by YALA luxury canvas lodges.

Benefits:

- CO2-neutral heating
- Cost savings - Heating with pellets minimally offers a 40% saving compared to natural gas and more than 70% compared to propane.
- The charm of atmospheric flames
- The comfortable heat of a wood fire - Any moist air will quickly disappear on a rainy day, leaving you with an optimal holiday feeling.
